

1.CREATE TABLE

The screenshot displays the SQL Server Enterprise Manager interface. On the left, the 'SCHEMAS' pane shows the 'bookflow_db' database with its components: Tables, Views, Stored Procedures, Functions, practice, and sys. The main editor window, titled 'SQL File 4', contains the following SQL script:

```
1 USE bookflow_db;
2 CREATE TABLE bank_transactions (
3     txn_id INT PRIMARY KEY,
4     customer_name VARCHAR(50),
5     branch_name VARCHAR(50),
6     transaction_type VARCHAR(20),
7     amount DECIMAL(10,2),
8     transaction_date DATE
9 );
```

At the bottom, the 'Output' pane shows the 'Action Output' table, which records the execution of the SQL script:

#	Time	Action	Message
1	14:22:42	USE bookflow_db	0 row(s) affected
2	14:23:38	CREATE TABLE bank_transactions (txn_id...	0 row(s) affected
